Projects

Portfolio

Explora - Travel Planner and Explorer

Technologies Used: Next.js , TypeScript, Tailwind CSS , MongoDB, Auth.js, Resend , Google Gemini API , OpenWeather API , Ola Maps API .

Project Description: Built a travel planning web app enabling users to explore photos, access real-time weather, plan trips with accommodation and travel options, and use interactive maps with live data.

Key Features:

- **User Authentication:** Secure login with Google and Microsoft via AuthJS and MongoDB.
- **Email Integration:** Send travel plans via email using Resend.

Thunder-Tube - YouTube Clone

Technologies Used: React , Node.js , Tailwind CSS , HTML , CSS , JavaScript , MongoDB

Project Description: Developed a YouTube clone with all essential features such as subscriptions, likes, playlists, comments, channel profiles, and secure login/registration using JWT.

Key Features:

- **User Authentication:** Secure login and registration with JWT.
- **YouTube Features:** Supports subscriptions, likes, playlists, comments, and channel profiles.
- **Data Processing:** Utilized MongoDB aggregation pipelines for advanced queries.
  This project showcases proficiency in building full-stack applications with user authentication and rich media functionalities.
